

Safety Mat/Safety Mat Controller

UM/MC3

CSM_UM_MC3_DS_E_4_1

New Safety Mat That Is Easy to Install and Maintain

- Meets Safety Category 3 (EN954-1) requirements when used in combination with a dedicated controller.
- Simple connection allows multiple mats to be joined together.
- A wide variety of mat sizes are available.
- Obtained EN1760-1 and EN954-1 (Cat.3) certification.
- Complies with North American safety standards, including ANSI/RIA15.06-1999.

Be sure to read the "Safety Precautions" on page 10.

1000	1250	UMM5-1000-1250	UMYM5-1000-1250
1000	1500	UMM5-1000-1500	UMYM5-1000-1500

Note: The actual lengths of the Safety Mat are 12 mm longer in both dimension A and dimension B.

Trims

Appearance	Name	Model	Remarks
	Ramp Trim with Yellow PVC Cover (1.22 m)	UMRT4	Installed on the perimeter of the Safety Mat. Each Trim is composed of two parts, an aluminum base and a PVC Cover. Possible to install cables inside.
	Ramp Trim with Yellow PVC Cover (2.44 m)	UMRT8	
	Joining Trim (1.22 m)	UMJS4	The Joining Trims join the Safety Mats when two or more Safety Mats are being combined. In addition to joining the Safety Mats, the Joining Trims preserve the Safety Mat's sensitivity at the joints.
	Joining Trim (2.44 m)	UMJS8	
	Aluminum Ramp Trim (2.44 m)	UMAL	Installed on the perimeter of the Safety Mat.
	Molded Outside Corner	UMOC	Installed at the outside corners of the Safety Mat combining with Ramp Trims with Yellow PVC Cover.
	Molded Inside Corner	UMIC	Installed at the inside corners when two or more Safety Mats combining with Ramp Trims with Yellow PVC Cover are being combined.

Note: Screws (No. 8 × 32 mm) and anchors (12 each) are included with each Trim.

Accessories

Appearance	Name	Model	Remarks
	Distribution Box (for six mats)	UMDB-6	Used to connect to two or more Safety Mats to the single MC3 Safety Mat Controller.
	Waterproof Cover	XS2Z-22	Used to protect the unused connectors of UMDB-6.
	Y Connector	UM-Y-2-1	Used to connect two Safety Mats to the single MC3 Safety Mat Controller.
	Panel-mount Connector	UMPMC	Distributes to individual lines to connect the Safety Mat to a MC3 Safety Mat Controller.
	Extension Cable (3 m)	UMEC-03	This cable is used to extend a cable, or to connect the UMPMC to the UMDB-6.
	Extension Cable (5 m)	UMEC-05	
	Extension Cable (10 m)	UMEC-10	
	Extension Cable (15 m)	UMEC-15	
	Connector with cable Socket on one cable end (1 m)	XS2F-D421-C80-A	Used to connect the UMDB-6 to the MC3 Safety Mat Controllers.
	Connector with cable Socket on one cable end (2 m)	XS2F-D421-D80-A	
	Connector with cable Socket on one cable end (5 m)	XS2F-D421-G80-A	
	Connector with cable Socket on one cable end (10 m)	XS2F-D421-J80-A	

Note: For trims and accessories required for the Safety Mat system configuration, see "Installation" on page 4.

Specifications

Ratings

Safety Mat Controller

Power input

Item	Model	MC3
Power voltage		24 VDC
Operating voltage range		-15% to +15% of rated supply voltage
Power consumption *		3 W max.

* Power consumption of loads is not included.

Switch

Item	Model	MC3
Rated load		6 A at 230 VAC/6 A at 24 VDC (resistive load) 5 A at 230 VAC (AC15)/2 A at 24 VDC (DC13) (inductive load)
Maximum rated voltage		250 VAC/24 VDC
Rated carry current		6 A
Maximum switching capacity		1,500 VA

Characteristics

Safety Mat

Item	Model	UM
Detection method		Pressure sensing method
Detection weight		30 kg min.
Maximum allowable load		2,000 N (EN1760-1 requirement)
Mechanical durability		1 million cycles min.
Material		PVC (Polyvinyl Chloride)
Ambient operating temperature		-37 to 66°C (with no icing or condensation)
Degree of protection		IP67
Weight		Approx. 24.4 kg/m ²

Safety Mat Controller

Item	Model	MC3
Response time		30 ms max.
Safety input		Four-wire Safety Mat only Mat can be connected in series (Connectable number: 12 max.) The external impedance must be 8 Ω or less between M11 and M21 and between M12 and M22.
Safety output		SPDT-NO
Auxiliary output		SPDT-NC
Insulation resistance		20 MΩ min. (at 500 VDC)
Dielectric strength	Between different poles of outputs	1,800 VAC, 50/60 Hz for 1 min.
	Between power supply and output	
Vibration resistance		Malfunction: 10 to 55 Hz, 0.15 mm single amplitude
Mechanical shock resistance		Malfunction: 98 m/s ²
Durability	Mechanical	10,000,000 cycles min.
	Electrical	100,000 cycles min. (rated load, switching frequency: 360 cycles/hour)
Ambient operating temperature		0 to 55°C (with no icing or condensation)
Ambient operating humidity		0% to 90% RH
Degree of protection		IP20
Terminal tightening torque		0.5 N·m
Weight		Approx. 360 g

Installation

Using Trim Pieces

Ramp Trim with Yellow PVC Cover: UMRT4/UMRT8

Secures the edges of the Safety Mats to the floor.

It is composed of two parts with an aluminum base and a PVC Cover.

Joining Trim: UMJS4/UMJS8

The Joining Trims join the Safety Mats when two or more Safety Mats are being combined.

In addition to joining the Safety Mats, the Joining Trims preserve the Safety Mat's sensitivity at the joints.

Aluminum Ramp Trim: UMAL

Secures the edges of the Safety Mat to the floor.

The Aluminum Ramp Trim is hollow, so cable can be routed through it.

Molded Outside Corner: UMOG

Used together with the Ramp Trim with Yellow PVC Cover (UMRT4/UMRT8) to secure the external corners of the Safety Mats to the floor.

Molded Inside Corner: UMIC

Used together with the Ramp Trim with Yellow PVC Cover (UMRT4/UMRT8) to secure the internal corners of the Safety Mats to the floor.

- Note:**
1. The Aluminum Ramp Trim or Ramp Trim with Yellow PVC Cover must be cut to fit the size of the Safety Mats being used. Furthermore, when the Safety Mat's wiring is being routed through the Aluminum Ramp Trim or Ramp Trim with Yellow PVC Cover, it will be necessary to cut or notch the Aluminum Ramp Trim or Ramp Trim with Yellow PVC Cover for cable access. Refer to the Safety Mat Instruction Sheet for details on cutting or notching the Aluminum Ramp Trim or Ramp Trim with Yellow PVC Cover.
 2. The Joining Trim must be cut to fit the size of the Safety Mats being used.
 3. The Ramp Trim with Yellow PVC Cover and Molded Corner must be anchored to the floor to secure the Safety Mats. It is also necessary to drill holes in the Trim to anchor it. Refer to the Safety Mat Instruction Sheet for details on drilling holes in the Trim and Molded Corner and anchoring it to the floor.

Safety Mat Configuration

The Safety Mats are secured by anchoring the Ramp Trim with Yellow PVC Cover and Molded Corner to the floor.

Before ordering, confirm the number of Ramp Trim with Yellow PVC Cover and Molded Corner pieces that will be needed.

Example 1: Using a Single Safety Mat

In this case, the perimeter of the Safety Mat is about 4 m and the following pieces are required:

The example above consists of the following components:

UMYM5-1000-1000 Safety Mat	: 1 piece
UMRT4 Ramp Trim with Yellow PVC Cover (1.22 m)	: 4 pieces
UMOG Molded Outside Corner	: 4 pieces

Example 2: Using three Safety Mats

In this case, the perimeter of the Safety Mat is about 8 m, the joint between the Safety Mats is 2-m long, and the following pieces are required:

The example above consists of the following components:

UMYM5-1000-1000 Safety Mat	: 3 pieces
UMRT4 Ramp Trim with Yellow PVC Cover (1.22 m)	: 8 pieces
UMJS4 Joining Trim (1.22 m)	: 2 pieces
UMOG Molded Outside Corner	: 5 pieces
UMIC Molded Inside Corner	: 1 piece

Wiring of Safety Mat and Safety Mat Controller

Example 1: Using a Single Safety Mat

Note: You can cut a Safety Mat's cable and wire it to the MC3 Safety Mat Controller without using UMPMC.

Example 2: Using Two Safety Mats

Example 3: Using Six Safety Mats

Connecting directly to Safety Mat Controller

Connecting to Safety Mat Controller in a panel

- Note:**
1. Use UMEC-□ Extension Cables as required by the distance between the Safety Mats and the Mat Controller.
 2. When using the UMDB-6 to connect to 1 to 5 Mats, change the wiring inside the UMDB-6. Refer to user documentation provided with the UMDB-6.

Contact your dealer for other wiring combinations.

Connections

Internal Connection

Wiring of Inputs and Outputs

Signal name	Terminal name	Description of operation	Wiring
Power supply input	Y1, Y2	Power supply input terminals for MC3 Connect the power source to the Y1 and Y2 terminals.	Connect the power supply plus (24 VDC) to the Y1 terminal. Connect the power supply minus (GND) to the Y2 terminal.
Safety Mat input	M11, M12, M21, M22	To turn ON safety outputs, all the connected safety mats must have no load. Otherwise, the safety outputs will NOT turn ON.	
Reset input	X1, X2	The Safety Outputs can be turned ON only after the connection between X1 and X2 closes and then opens. If the connection between X1 and X2 does not close and open, the Safety Outputs will not turn ON.	Manual Reset Mode
		The normal operation can be made if the connection between X1 and X2 is open.	Auto Reset Mode
Safety output	13-14, 23-24	The Safety Outputs are turned ON and OFF according to the status of the Safety Mat inputs and the reset input.	Keep these outputs Open when NOT used.
Auxiliary output	31-32, 41-42	Turns ON/OFF according to the state of the opposite logic to the safety outputs.	Keep these outputs Open when NOT used.

Changing the Reset Mode

You can select either the Auto Reset Mode or the Manual Reset Mode with the MC3 Controller.
Remove the terminal block from the top of the MC3 Controller to expose three yellow jumpers. Set the jumps as required by system specifications.

Auto Reset Mode (Factory Setting)

Leave all three jumpers connected.

Manual Reset Mode

Remove all three jumpers.

Application Examples

UM□ + MC3 (Manual Reset) + Safety Door Switch (D4GS-N, D4NS, or D4BS) + G9SB (Auto Reset)

(A Safety Relay Unit or Safety Controller other than the G9SB can be used.)

Timing Chart

- Note:**
1. The above circuit examples are equivalent to category 3.
 2. Determine Mat dimensions based on safe distances. Refer to "Safety Precautions" on page 10 for the information on calculating safe distances.
 3. Remove the three yellow jumpers to use Manual Reset Mode. Refer to "Changing the Reset Mode" on page 6 for the location of the jumpers.

UM□ + MC3 (Auto Reset) + Safety Door Switch (D4GS-N, D4NS, or D4BS) + G9SB (Auto Reset)

(A Safety Relay Unit or Safety Controller other than the G9SB can be used.)

Timing Chart

- Note:**
1. The above circuit examples are equivalent to category 3.
 2. Determine Mat dimensions based on safe distances. Refer to "Safety Precautions" on page 10 for the information on calculating safe distances.
 3. Remove the three yellow jumpers to use Manual Reset Mode. Refer to "Changing the Reset Mode" on page 6 for the location of the jumpers.

Safety Precautions

Before installing and using the Safety Mat System, carefully read the instruction manual attached to the product.

⚠ WARNING

Serious injury may occur due to breakdown of safety outputs. Do not connect loads beyond the rated value to the safety outputs.

Serious injury may occur due to loss of required safety functions. Do not use the Safety Mat with logics that the operation of the mat might turn ON the guarded equipment. Use the Safety Mat with logics by which safety outputs turn OFF in a hazardous state.

Serious injury may occur due to loss of required safety functions. Wire the Safety Mat properly so that supply voltages or voltages for loads do NOT touch the safety inputs accidentally or unintentionally.

Serious injury may occur due to loss of required safety functions. Do not use a Safety Mat to detect children as it does not support child detection.

To use a Safety Mat for the purpose of entry detection, secure the following safety distance until a person reaches a hazardous area by walking on the mat. Otherwise, the machine may not stop before the person reaches the hazardous area, causing injury.

Calculation of the Minimum Safety Distance

The EN999 standards provide the following formula to calculate the minimum safety distance for floor-installed Safety Mats:

$$S = (1,600 \times T) + 1,200 \text{ mm}$$

In this equation, S is the minimum safety distance (unit: mm), the term 1,600 represents a standard approach speed of 1,600 mm/s, T is the overall stop time required for the machinery to stop, and the term 1,200 mm represents the length of a step and the length of an arm.

The overall stop time is comprised of two components:

$$T = t_1 + t_2$$

t₁ : Maximum response time from the activation of the detection device to the point that the control device's output goes OFF (30 ms for these Safety Mats).

t₂ : Response time of the machinery, i.e., the time required to stop the machine or remove the risk after receiving the output signal from the Safety Mat System.

The worst case scenario for the response time of the machinery (t₂) must be used in the formula. The actual response time depends on various factors such as the machinery being used, the operating mode, the product being processed, and the point in the control cycle at which the stop signal is received. If there are other factors that may affect the response time, such as brake wear, these factors must be taken into account as well.

Example Calculation

In this example, the Safety Mats are used with machinery that has a measured worst-case response time of 0.485 s.

$$T = t_1 + t_2$$

$$= 30 \text{ ms} + 485 \text{ ms}$$

$$= 515 \text{ ms} = 0.515 \text{ s}$$

$$S = (1,600 \times 0.515) + 1,200 \text{ mm}$$

$$= 824 + 1,200 \text{ mm} = 2,024 \text{ mm}$$

Consequently, the Safety Mat must be installed at a minimum distance of 2,024 mm from the danger source.

- Note:**
1. Read the Instruction Sheet included with the Safety Mat System thoroughly for details on designing and installing the Safety Mat System to provide the minimum safety distance mentioned above.
 2. The Safety Mat's Ramp Trim and Molded Corner are not considered part of the Safety Mat's detecting area. Do not include the Ramp Trim and Molded Corner in the safety distance.

Precautions for Safe Use

- Turn OFF the power supply before wiring. Also, do not touch any terminals (current-carrying parts) while the power is ON. Doing so may result in electric shock.
- Do not perform wiring when there is a risk of lightning. Doing so may result in electric shock.
- Apply properly specified voltages to the Safety Mat inputs. Applying inappropriate voltages cause the Safety Mat to fail to perform its specified function, which leads to the loss of safety functions or damages to the Safety Mat.
- Use a power supply of the specified voltage. Do not use power supplies with large ripples or power supplies that intermittently generate incorrect voltages.
- Do not use the Safety Mat for a load that exceeds the Safety Mat's switching capacity (contact voltage, contact current) or other contact ratings. Doing so will reduce the specified performance, causing insulation failure, contact welding, and contact failure, and the Safety Mat may be damaged or burnt.
- The durability of the Safety Mat depends greatly on the switching conditions. Confirm operation under the actual conditions in which the Safety Mat will be used. Make sure the number of switching operations is within the permissible range. If a Safety Mat is used after performance has deteriorated, it may result in insulation failure between circuits and burning of the Safety Mat itself.
- Do not use the Safety Mat where flammable gases or explosive gases may be present. Doing so may cause combustion or explosion due to Relay heating or arcing during switching.
- Do not drop or disassemble the Safety Mat. Doing so may reduce the product characteristics and may result in damage, electric shock, or burning.
- To prevent short-circuit or ground failure of the load, connect protection elements such as fuses. Not doing so may damage or burn the load.
- When installing trims, be careful not to get injured by the edge of the trim, etc.

Precautions for Correct Use

Make sure to use the Safety Mat UM series in combination with the Safety Mat Controller MC series.

Handle with care

1. Do not drop the Safety Mat to the ground or expose to excessive vibration or mechanical shocks. The Safety Mat may be damaged and may not function properly.
2. Do not apply loads on a certain location of the Safety Mat for a long period of time. It may damage the Safety Mat.
3. Do not use the Safety Mat submerged in water or in locations continuously subject to splashes of water.
4. Store the Safety Mat in a vertical (standing) position prior to install so that loads are not applied to the Safety Mat.

Solvents

Adhesion of solvent such as alcohol, thinner, trichloroethane or gasoline on the product should be avoided. Such solvents make the marking on the Safety Mat illegible and cause deterioration of parts.

Storage conditions of the Safety Mat

Do not store in such conditions stated below.

1. In direct sunlight
 2. At ambient temperatures out of the range of -37 to 66°C.
 3. At air pressure out of the range of 86 to 106 kPa.
 4. In corrosive or combustible gases
 5. With vibration or mechanical shocks out of the rated values.
 6. Under splashing of oil, chemicals
 7. In the atmosphere containing dust, saline or metal powder.
- The Safety Mat may be damaged and may not function properly.

Storage conditions of the Safety Mat Controller

Do not store in such conditions stated below.

1. In direct sunlight
 2. At ambient temperatures out of the range of 0 to 55°C.
 3. At relative humidity out of the range of 90%RH or under such temperature change that causes condensation.
 4. At air pressure out of the range of 86 to 106 kPa.
 5. In corrosive or combustible gases
 6. With vibration or mechanical shocks out of the rated values.
 7. Under splashing of water, oil, chemicals
 8. In the atmosphere containing dust, saline or metal powder.
- The Safety Mat Controller may be damaged and may not function properly.

Wiring of the Safety Mat Controller

1. Use the following to wire to the Safety Mat Controller
 - Stranded wire (Flexible wire): 0.2 to 2.5 mm²
 - Solid wire: 0.2 to 2.5 mm²
 - Strip the cover of wire no longer than 7 mm.
2. Tighten each screw with a specified torque of 0.4 to 0.5 N·m, or the Safety Mat Controller may malfunction or generate heat.
3. Ground the negative side of the power supply. A controller with the positive side grounding will not work.

Mounting of multiple Safety Mat Controllers

1. In closely contacted mounting, the rated carry current is 3 A. Use at 3 A or less voltage.
2. When applying more than 3A, place the mats farther than 25 mm from the nearest MC3.

Mounting of the Safety Mat Controller to DIN rails

Use end plates (PFP-M: sold separately) on both ends of MC3.

Use of air valve

1. After installing a mat, loose the air valve on the surface of the mat for 30 seconds or more in order to make the internal air pressure equal to external air pressure. Then, close the air valve.
2. Turn the air valve with a torque at 1.5 N·m or less.
3. Do not store or use the mat with loose air valve. It may allow water penetration.

Mounting of the Safety Mat

1. Use- dedicated trims to secure the circumference of the Safety Mat for installation.
2. Do not install the Safety Mat on an environment with a projection. Install it on a flat surface.
3. Do not pull the cables to lift or move the Safety Mat.
4. Do not use the Safety Mat with a cover on it.

Others

This is a Class A product (Product in industrial setting). Use of the product in residential setting may cause radio disturbance. In such case, take appropriate measures.

Safety Category

Certification has been obtained for EN 954-1 Safety Category 3 for a system consisting of only Safety Mats and the Safety Controller. A separate safety controller is required to achieve a category 3 safety circuit if external safety relays or magnetic contactors are connected.

Read and Understand This Catalog

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

2009.10

In the interest of product improvement, specifications are subject to change without notice.
