

DM74LS290 4-Bit Decade Counter

General Description

The 'LS290 counter is electrically and functionally identical to the 'LS90. Only the arrangement of the terminals has been changed for the 'LS290.

Each of these monolithic counters contains four master-slave flip-flops and additional gating to provide a divide-by-two counter and a three-stage binary counter for which the count cycle length is divide-by-five.

This counter has a gated zero reset and gated set-to-nine inputs for use in BCD nine's complement applications.

To use the maximum count length (decade) of this counter, the B input is connected to the Q_A output. The input count pulses are applied to input A and the outputs are as de-

scribed in the appropriate function table. A symmetrical divide-by-ten count can be obtained from the 'LS290 counter by connecting the Q_D output to the A input and applying the input count to the B input which gives a divide-by-ten square wave at output Q_A .

Features

- GND and V_{CC} on Corner Pins (Pins 7 and 14 respectively)
- Typical power dissipation 45 mW
- Count frequency 42 MHz

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
