

## 256MB Unbuffered SDRAM Micro DIMM

**HB52RF328GB-B (32M words × 64 bits, 1 bank)****HB52RD328GB-B (32M words × 64 bits, 1 bank)**

### Description

The HB52RF328GB and HB52RD328GB are a 32M × 64 × 1 banks Synchronous Dynamic RAM Micro Dual In-line Memory Module (Micro DIMM), mounted 8 pieces of 256M bits SDRAM (HM522805BTB/BLTB) sealed in TCP package and 1 piece of serial EEPROM (2k bits EEPROM) for Presence Detect (PD). An outline of the products is 144-pin Zig Zag Dual tabs socket type compact and thin package. Therefore, they make high density mounting possible without surface mount technology. They provide common data inputs and outputs. Decoupling capacitors are mounted beside TCP on the module board.

Note: Do not push the cover or drop the modules in order to protect from mechanical defects, which would be electrical defects.

### Features

- 144-pin Zig Zag Dual tabs socket type (dual lead out)
  - Outline: 38.00mm (Length) × 30.00mm (Height) × 3.80mm (Thickness)
  - Lead pitch: 0.50mm
- 3.3V power supply
- Clock frequency: 133MHz/100MHz (max.)
- LVTTTL interface
- Data bus width: × 64 Non parity
- Single pulsed /RAS
- 4 Banks can operates simultaneously and independently
- Burst read/write operation and burst read/single write operation capability
- Programmable burst length (BL): 1, 2, 4, 8
- 2 variations of burst sequence
  - Sequential
  - Interleave
- Programmable /CE latency (CL): 2, 3
- Byte control by DQMB
- Refresh cycles: 8192 refresh cycles/64ms
- 2 variations of refresh
  - Auto refresh
  - Self refresh
- Low self refresh current : HB52RF328GB-xxBL  
: HB52RD328GB-xxBL

## Ordering Information

Part number	Clock frequency MHz (max.)	/CE latency	Package	Contact pad
HB52RF328GB-75B* <sup>1</sup>	133	3	Micro DIMM (144-pin)	Gold
HB52RF328GB-75BL* <sup>1</sup>	133	3		
HB52RD328GB-A6B	100	2, 3		
HB52RD328GB-A6BL	100	2, 3		
HB52RD328GB-B6B* <sup>2</sup>	100	3		
HB52RD328GB-B6BL* <sup>2</sup>	100	3		

Notes: 1. 100MHz operation at /CE latency = 2.

2. 66MHz operation at /CE latency = 2.

### Pin Description

Pin name	Function
A0 to A12	Address input — Row address A0 to A12 — Column address A0 to A9
BA0, BA1	Bank select address
DQ0 to DQ63	Data-input/output
/S0	Chip select
/RE	Row address asserted bank enable
/CE	Column address asserted
/W	Write enable
DQMB0 to DQMB7	Byte input/output mask
CK0, CK1	Clock input
CKE0	Clock enable
SDA	Data-input/output for serial PD
SCL	Clock input for serial PD
VCC	Power supply
VSS	Ground
NC	No connection

Serial PD Matrix\*<sup>1</sup>

95 to 98	Assembly serial number	*3									
99 to 125	Manufacturer specific data	—	—	—	—	—	—	—	—	—	*4
126	Intel specification frequency	0	1	1	0	0	1	0	0	64	100MHz
127	Intel specification /CE# latency support (-75/A6)	1	0	0	0	0	1	1	1	87	CL = 2, 3
	(-B6)	1	0	0	0	0	1	0	1	85	CL = 3

Notes: 1. All serial PD data are not protected. 0: Serial data, "driven Low", 1: Serial data, "driven High". These SPD are based on Rev.1.2B specification.

2. Byte72 is manufacturing location code. (ex: In case of Japan, byte72 is 4AH. 4AH shows "J" on ASCII code.)
3. Bytes 95 through 98 are assembly serial number.
4. All bits of 99 through 125 are not defined ("1" or "0").

# Block Diagram

**Electrical Specifications****Absolute Maximum Ratings**

Parameter	Symbol	Value	Unit	Note
Voltage on any pin relative to VSS	VT	−0.5 to VCC + 0.5 (≤ 4.6 (max.))	V	1
Supply voltage relative to VSS	VCC	−0.5 to +4.6	V	1
Short circuit output current	IOUT	50	mA	
Power dissipation	PT	8.0	W	
Operating temperature	Topr	0 to +65	°C	
Storage temperature	Tstg	−55 to +125	°C	

Note: 1. Respect to VSS.

**DC Operating Conditions (TA = 0 to +65°C)**

Parameter	Symbol	min.	max.	Unit	Note
Supply voltage	VCC	3.0	3.6	V	1, 2
	VSS	0	0	V	3
Input high voltage	VIH	2.0	VCC + 0.3	V	1, 4
Input low voltage	VIL	−0.3	0.8	V	1, 5
Ambient illuminance	—	—	100	lx	

Notes: 1. All voltage referred to VSS.

2. The supply voltage with all VCC pins must be on the same level.
3. The supply voltage with all VSS pins must be on the same level.
4. VIH (max.) = VCC + 2.0V for pulse width ≤ 3ns at VCC.
5. VIL (min.) = VSS − 2.0V for pulse width ≤ 3ns at VSS.

**DC Characteristics 1 (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)**

Parameter	Symbol	Grade	Max.	Unit	Test conditions	Notes
Operating current (CL = 2)	ICC1	-75	880	mA	Burst length = 1 tRC = min.	1, 2, 3
		-A6	760			
		-B6	600			
(CL = 3)	ICC1	-75	880	mA		
		-A6	760			
		-B6	760			
Standby current in power down	ICC2P		24	mA	CKE0 = VIL, tCK = 12ns	6
Standby current in power down (input signal stable)	ICC2PS		16	mA	CKE0 = VIL, tCK = ∞	7
Standby current in non power down	ICC2N		160	mA	CKE0, /S = VIH, tCK = 12ns	4
Active standby current in power down	ICC3P		32	mA	CKE0, /S = VIH, tCK = 12ns	1, 2, 6
Active standby current in non power down	ICC3N		240	mA	CKE0, /S = VIH, tCK = 12ns	1, 2, 4
Burst operating current (CL = 2)	ICC4	-75	800	mA	tCK = min., BL = 4	1, 2, 5
		-A6	800			
		-B6	600			
(CL = 3)	ICC4	-75	1080	mA		
		-A6	800			
		-B6	800			
Refresh current	ICC5		1760	mA	tRC = min.	3
Self refresh current	ICC6		24	mA	VIH ≥ VCC – 0.2V VIL ≤ 0.2V	8
Self refresh current (L-version)	ICC6		16	mA		

Notes: 1. ICC depends on output load condition when the device is selected. ICC (max.) is specified at the output open condition.

2. One bank operation.
3. Input signals are changed once per one clock.
4. Input signals are changed once per two clocks.
5. Input signals are changed once per four clocks.
6. After power down mode, CK0/CK1 operating current.
7. After power down mode, no CK0/CK1 operating current.
8. After self refresh mode set, self refresh current.

**DC Characteristics 2 (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)**

Parameter	Symbol	Grade	min.	Max.	Unit	Test conditions	Notes
Input leakage current	ILI		-10	10	μA	0 ≤ Vin ≤ VCC	
Output leakage current	ILO		-10	10	μA	0 ≤ Vout ≤ VCC DQ = disable	
Output high voltage	VOH		2.4	—	V	IOH = -4 mA	
Output low voltage	VOL		—	0.4	V	IOL = 4 mA	

**Pin Capacitance (TA = 25°C, VCC = 3.3V ± 0.3V)**

Parameter	Symbol	Pins	max.	Unit	Notes
Input capacitance	CIN	Address	80	pF	1, 2, 4
Input capacitance	CIN	/RE, /CE, /W, CK0/CK1, CKE0	80	pF	1, 2, 4
Input capacitance	CIN	/S0	80	pF	1, 2, 4
Input capacitance	CIN	DQMB	20	pF	1, 2, 4
Input/Output capacitance	CI/O	DQ	20	pF	1, 2, 3, 4

Notes: 1. Capacitance measured with Boonton Meter or effective capacitance measuring method.

2. Measurement condition: f = 1MHz, 1.4V bias, 200mV swing.

3. DQMB = VIH to disable Data-out.

4. This parameter is sampled and not 100% tested.

**AC Characteristics (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)**

Parameter	Symbol	PC100 Symbol	-75		-A6		-B6		Unit	Notes

Active command to column command (same bank)	tRCD	Trcd	20	—	20	—	20	—	ns	1
Precharge to active command period	tRP	Trp	20	—	20	—	20	—	ns	1
Write recovery or data-in to precharge lead time	tDPL	Tdpl	15	—	20	—	20	—	ns	1
Active (a) to Active (b) command period	tRRD	Trrd	15	—	20	—	20	—	ns	1
Transition time (rise and fall)	tT		1	5	1	5	1	5	ns	
Refresh period	tREF		—	64	—	64	—	64	ms	

- Notes: 1. AC measurement assumes  $t_T = 1\text{ns}$ . Reference level for timing of input signals is 1.5V.  
 2. Access time is measured at 1.5V. Load condition is  $C_L = 50\text{pF}$ .  
 3.  $t_{LZ}$  (min.) defines the time at which the outputs achieves the low impedance state.  
 4.  $t_{HZ}$  (max.) defines the time at which the outputs achieves the high impedance state.  
 5.  $t_{CES}$  defines CK setup time to CK rising edge except power down exit command.

#### Test Conditions

- Input and output timing reference levels: 1.5V
- Input waveform and output load: See following figures

## Relationship Between Frequency and Minimum Latency

Parameter			-75	-A6, -B6	
Frequency (MHz)			133	100	
$t_{CK}$ (ns)	Symbol	PC100 Symbol	7.5	10	Notes
Active command to column command (same bank)	IRCD		3	2	1
Active command to active command (same bank)	IRC		9	7	= $[I_{RAS} + I_{RP}]$ 1
Active command to precharge command (same bank)	IRAS		6	5	1
Precharge command to active command (same bank)	IRP		3	2	1
Write recovery or data-in to precharge command (same bank)	IDPL	Tdpl	2	2	1
Active command to active command (different bank)	IRRD		2	2	1
Self refresh exit time	ISREX	Tsrx	1	1	2
Last data in to active command (Auto precharge, same bank)	IAPW	Tdal	5	4	= $[I_{DPL} + I_{RP}]$
Self refresh exit to command input	ISEC		9	7	= $[I_{RC}]$ 3
Precharge command to high impedance (CL = 2)	IHZP	Troh	2	2	
(CL = 3)	IHZP	Troh	3	3	
Last data out to active command (Auto precharge, same bank)	IAPR		1	1	
Last data out to precharge (early precharge) (CL = 2)	IEP		-1	-1	
(CL = 3)	IEP		-2	-2	
Column command to column command	ICCD	Tccd	1	1	
Write command to data in latency	IWCD	Tdwd	0	0	
DQMB to data in	IDID	Tdqm	0	0	
DQMB to data out	IDOD	Tdqz	2	2	
CKE to CK disable	ICLE	Tcke	1	1	
Register set to active command	IRSA	Tmrd	1	1	
/S to command disable	ICDD		0	0	
Power down exit to command input	IPEC		1	1	

Notes: 1. IRCD to IRRD are recommended value.

2. Be valid [DESL] or [NOP] at next command of self refresh exit.

3. Except [DESL] and [NOP]

## Pin Functions

**CK0/CK1 (input pin):** CK is the master clock input to this pin. The other input signals are referred at CK rising edge.

**/S0 (input pin):** When /S is Low, the command input cycle becomes valid. When /S is High, all inputs are ignored. However, internal operations (bank active, burst operations, etc.) are held.

**/RE, /CE and /W (input pins):** Although these pin names are the same as those of conventional DRAM modules, they function in a different way. These pins define operation commands (read, write, etc.) depending on the combination of their voltage levels. For details, refer to the command operation section.

**A0 to A12 (input pins):** Row address (AX0 to AX12) is determined by A0 to A12 level at the bank active command cycle CK rising edge. Column address (AY0 to AY9) is determined by A0 to A9 level at the read or write command cycle CK rising edge. And this column address becomes burst access start address. A10 defines the precharge mode. When A10 = High at the precharge command cycle, both banks are precharged. But when A10 = Low at the precharge command cycle, only the bank that is selected by BA0, BA1(BA) is precharged.

**BA0, BA1 (input pin):** BA0, BA1 is a bank select signal (BA). The memory array is divided into bank0, bank1, bank2 and bank3. If BA0 is Low and BA1 is Low, bank0 is selected. If BA0 is Low and BA1 is High, bank1 is selected. If BA0 is High and BA1 is Low, bank2 is selected. If BA0 is High and BA1 is High, bank3 is selected.

**CKE0 (input pin):** This pin determines whether or not the next CK is valid. If CKE is High, the next CK rising edge is valid. If CKE is Low, the next CK rising edge is invalid. This pin is used for power-down mode, clock suspend mode and self refresh mode.

**DQMB0 to DQMB7 (input pins):** Read operation: If DQMB is High, the output buffer becomes High-Z. If the DQMB is Low, the output buffer becomes Low-Z (The latency of DQMB during reading is 2 clocks).

Write operation: If DQMB is High, the previous data is held (the new data is not written). If DQMB is Low, the data is written (The latency of DQMB during writing is 0 clock).

**DQ0 to DQ63 (DQ pins):** Data is input to and output from these pins.

**VCC (power supply pins):** 3.3V is applied.

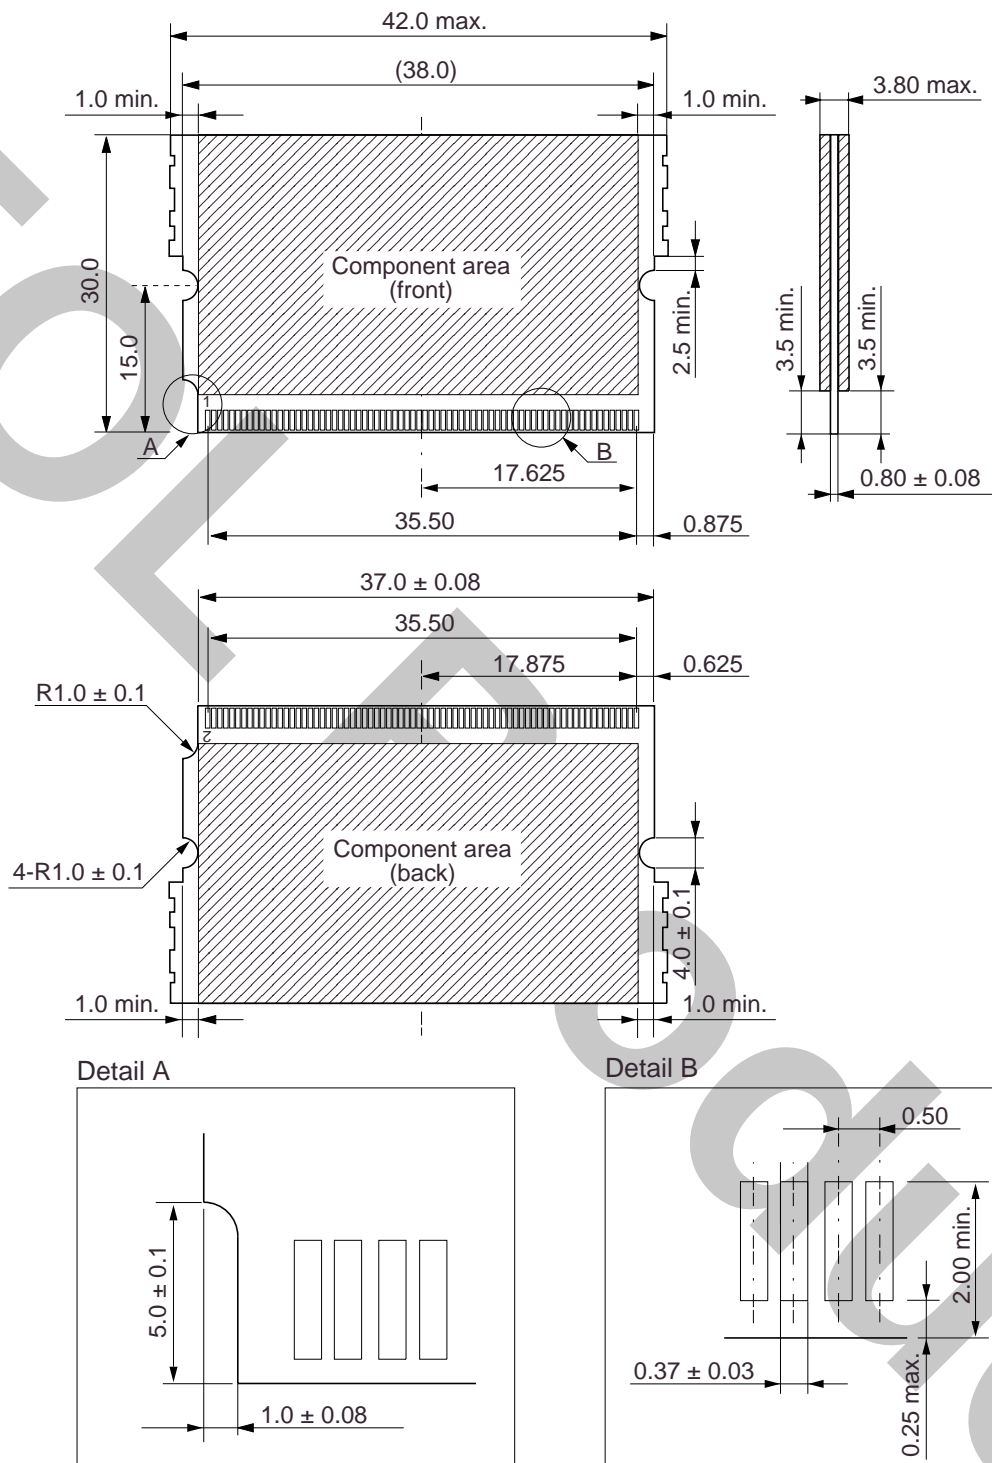

**VSS (power supply pins):** Ground is connected.

## Detailed Operation Part

Refer to the HM5225165B/HM5225805B/HM5225405B-75/A6/B6 datasheet.(E0082H)

## Physical Outline

Unit: mm

ECA-TS2-0028-01

**CAUTION FOR HANDLING MEMORY MODULES**

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory IC, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

When re-packing memory modules, be sure the modules are NOT touching each other. Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

**NOTES FOR CMOS DEVICES****① PRECAUTION AGAINST ESD FOR MOS DEVICES**

Exposing the MOS devices to a strong electric field can cause destruction of the gate oxide and ultimately degrade the MOS devices operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it, when once it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. MOS devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. MOS devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor MOS devices on it.

**② HANDLING OF UNUSED INPUT PINS FOR CMOS DEVICES**

No connection for CMOS devices input pins can be a cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. The unused pins must be handled in accordance with the related specifications.

**③ STATUS BEFORE INITIALIZATION OF MOS DEVICES**

Power-on does not necessarily define initial status of MOS devices. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the MOS devices with reset function have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. MOS devices are not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for MOS devices having reset function.

The information in this document is subject to change without notice. Before using this document, confirm that this is the latest version.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of Elpida Memory, Inc.

Elpida Memory, Inc. does not assume any liability for infringement of any intellectual property rights (including but not limited to patents, copyrights, and circuit layout licenses) of Elpida Memory, Inc. or third parties by or arising from the use of the products or information listed in this document. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of Elpida Memory, Inc. or others.

Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of the customer's equipment shall be done under the full responsibility of the customer. Elpida Memory, Inc. assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

**[Product applications]**

Elpida Memory, Inc. makes every attempt to ensure that its products are of high quality and reliability. However, users are instructed to contact Elpida Memory's sales office before using the product in aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment, medical equipment for life support, or other such application in which especially high quality and reliability is demanded or where its failure or malfunction may directly threaten human life or cause risk of bodily injury.

**[Product usage]**

Design your application so that the product is used within the ranges and conditions guaranteed by Elpida Memory, Inc., including the maximum ratings, operating supply voltage range, heat radiation characteristics, installation conditions and other related characteristics. Elpida Memory, Inc. bears no responsibility for failure or damage when the product is used beyond the guaranteed ranges and conditions. Even within the guaranteed ranges and conditions, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Elpida Memory, Inc. products does not cause bodily injury, fire or other consequential damage due to the operation of the Elpida Memory, Inc. product.

**[Usage environment]**

This product is not designed to be resistant to electromagnetic waves or radiation. This product must be used in a non-condensing environment.

If you export the products or technology described in this document that are controlled by the Foreign Exchange and Foreign Trade Law of Japan, you must follow the necessary procedures in accordance with the relevant laws and regulations of Japan. Also, if you export products/technology controlled by U.S. export control regulations, or another country's export control laws or regulations, you must follow the necessary procedures in accordance with such laws or regulations.

If these products/technology are sold, leased, or transferred to a third party, or a third party is granted license to use these products, that third party must be made aware that they are responsible for compliance with the relevant laws and regulations.
