

60 μ A, High Precision Op Amps

Features

- Low Offset Voltage: ± 150 μ V (maximum)
- Low Quiescent Current: 60 μ A (typical)
- Rail-to-Rail Input and Output
- Wide Supply Voltage Range: 1.8V to 6.0V
- Gain Bandwidth Product: 730 kHz (typical)
- Unity Gain Stable
- Extended Temperature Range: -40°C to $+125^{\circ}\text{C}$
- No Phase Reversal

Applications

- Automotive
- Portable Instrumentation
- Sensor Conditioning
- Battery Powered Systems
- Medical Instrumentation
- Test Equipment
- Analog Filters

Design Aids

- SPICE Macro Models
- FilterLab[®] Software
- Mindi[™] Circuit Designer & Simulator
- Microchip Advanced Part Selector (MAPS)
- Analog Demonstration and Evaluation Boards
- Application Notes

Typical Application

Description

The Microchip Technology Inc. MCP6061/2/4 family of operational amplifiers (op amps) has low input offset voltage (± 150 μ V, maximum) and rail-to-rail input and output operation. This family is unity gain stable and has a gain bandwidth product of 730 kHz (typical). These devices operate with a single supply voltage as low as 1.8V, while drawing low quiescent current per amplifier (60 μ A, typical). These features make the family of op amps well suited for single-supply, high precision, battery-powered applications.

The MCP6061/2/4 family is offered in single (MCP6061), dual (MCP6062), and quad (MCP6064) configurations.

The MCP6061/2/4 is designed with Microchip's advanced CMOS process. All devices are available in the extended temperature range, with a power supply range of 1.8V to 6.0V.

Package Types

MCP6061/2/4

NOTES:

1.0 ELECTRICAL CHARACTERISTICS

1.1 Absolute Maximum Ratings †

$V_{DD} - V_{SS}$	7.0V
Current at Input Pins	±2 mA
Analog Inputs (V_{IN+} , V_{IN-})††	$V_{SS} - 1.0V$ to $V_{DD} + 1.0V$
All Other Inputs and Outputs	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$
Difference Input Voltage	$ V_{DD} - V_{SS} $
Output Short-Circuit Current	continuous
Current at Output and Supply Pins	±30 mA
Storage Temperature	-65°C to +150°C
Maximum Junction Temperature (T_J)	+150°C
ESD protection on all pins (HBM; MM)	≥ 4 kV; 400V

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See 4.1.2 “Input Voltage And Current Limits”

1.2 Specifications

DC ELECTRICAL SPECIFICATIONS

Electrical Characteristics: Unless otherwise indicated, $V_{DD} = +1.8V$ to $+6.0V$, $V_{SS} = GND$, $T_A = +25^\circ C$, $V_{CM} = V_{DD}/2$, $V_{OUT} \approx V_{DD}/2$, $V_L = V_{DD}/2$ and $R_L = 10\text{ k}\Omega$ to V_L . (Refer to Figure 1-1).

Parameters	Sym	Min	Typ	Max	Units	Conditions
Input Offset						
Input Offset Voltage	V_{OS}	-150	—	+150	μV	$V_{DD} = 3.0V$, $V_{CM} = V_{DD}/3$
Input Offset Drift with Temperature	$\Delta V_{OS}/\Delta T_A$	—	±1.5	—	$\mu V/^\circ C$	$T_A = -40^\circ C$ to $+85^\circ C$, $V_{DD} = 3.0V$, $V_{CM} = V_{DD}/3$
	$\Delta V_{OS}/\Delta T_A$	—	±4.0	—	$\mu V/^\circ C$	$T_A = +85^\circ C$ to $+125^\circ C$, $V_{DD} = 3.0V$, $V_{CM} = V_{DD}/3$
Power Supply Rejection Ratio	PSRR	70	87	—	dB	$V_{CM} = V_{SS}$
Input Bias Current and Impedance						
Input Bias Current	I_B	—	±1.0	100	pA	$T_A = +85^\circ C$ $T_A = +125^\circ C$
	I_B	—	60	—	pA	
	I_B	—	1100	5000	pA	
Input Offset Current	I_{OS}	—	±1.0	—	pA	
Common Mode Input Impedance	Z_{CM}	—	$10^{13} 6$	—	ΩpF	
Differential Input Impedance	Z_{DIFF}	—	$10^{13} 6$	—	ΩpF	
Common Mode						
Common Mode Input Voltage Range	V_{CMR}	$V_{SS}-0.2$	—	$V_{DD}+0.2$	V	$V_{DD} = 1.8V$ (Note 1)
	V_{CMR}	$V_{SS}-0.3$	—	$V_{DD}+0.3$	V	$V_{DD} = 6.0V$ (Note 1)
Common Mode Rejection Ratio	CMRR	72	89	—	dB	$V_{CM} = -0.15V$ to $1.95V$, $V_{DD} = 1.8V$
		74	91	—	dB	$V_{CM} = -0.3V$ to $6.3V$, $V_{DD} = 6.0V$
		72	87	—	dB	$V_{CM} = 3.0V$ to $6.3V$, $V_{DD} = 6.0V$
		74	89	—	dB	$V_{CM} = -0.3V$ to $3.0V$, $V_{DD} = 6.0V$

Note 1: Figure 2-13 shows how V_{CMR} changed across temperature.

		—	±27	—	mA	V _{DD} = 6.0V
Power Supply						
Supply Voltage	V _{DD}	1.8	—	6.0	V	
Quiescent Current per Amplifier	I _Q	30	60	90	μA	I _O = 0, V _{DD} = 6.0V V _{CM} = 0.9V _{DD}

Note 1: [Figure 2-13](#) shows how V_{CMR} changed across temperature.

AC ELECTRICAL SPECIFICATIONS

Electrical Characteristics: Unless otherwise indicated, $T_A = +25^\circ C$, $V_{DD} = +1.8$ to $+6.0V$, $V_{SS} = GND$, $V_{CM} = V_{DD}/2$, $V_{OUT} \approx V_{DD}/2$, $V_L = V_{DD}/2$, $R_L = 10\text{ k}\Omega$ to V_L and $C_L = 60\text{ pF}$. (Refer to [Figure 1-1](#)).

Parameters	Sym	Min	Typ	Max	Units	Conditions
AC Response						
Gain Bandwidth Product	GBWP	—	730	—	kHz	
Phase Margin	PM	—	61	—	$^\circ$	$G = +1\text{ V/V}$
Slew Rate	SR	—	0.25	—	V/ μs	
Noise						
Input Noise Voltage	E_{ni}	—	4.5	—	μV_{p-p}	$f = 0.1\text{ Hz to }10\text{ Hz}$
Input Noise Voltage Density	e_{ni}	—	25	—	nV/ $\sqrt{Hz}$	$f = 10\text{ kHz}$
Input Noise Current Density	i_{ni}	—	0.6	—	fA/ $\sqrt{Hz}$	$f = 1\text{ kHz}$

TEMPERATURE SPECIFICATIONS

Electrical Characteristics: Unless otherwise indicated, $V_{DD} = +1.8V$ to $+6.0V$ and $V_{SS} = GND$.

Parameters	Sym	Min	Typ	Max	Units	Conditions
Temperature Ranges						
Operating Temperature Range	T_A	-40	—	+125	$^\circ C$	Note 1
Storage Temperature Range	T_A	-65	—	+150	$^\circ C$	
Thermal Package Resistances						
Thermal Resistance, 8L-2x3 TDFN	θ_{JA}	—	41	—	$^\circ C/W$	
Thermal Resistance, 8L-SOIC	θ_{JA}	—	149.5	—	$^\circ C/W$	
Thermal Resistance, 14L-SOIC	θ_{JA}	—	95.3	—	$^\circ C/W$	
Thermal Resistance, 14L-TSSOP	θ_{JA}	—	100	—	$^\circ C/W$	

Note 1: The internal junction temperature (T_J) must not exceed the absolute maximum specification of $+150^\circ C$.

1.3 Test Circuits

The circuit used for most DC and AC tests is shown in [Figure 1-1](#). This circuit can independently set V_{CM} and V_{OUT} ; see [Equation 1-1](#). Note that V_{CM} is not the circuit's common mode voltage ($(V_P + V_M)/2$), and that V_{OST} includes V_{OS} plus the effects (on the input offset error, V_{OST}) of temperature, CMRR, PSRR and A_{OL} .

EQUATION 1-1:

$$G_{DM} = R_F/R_G$$

$$V_{CM} = (V_P + V_{DD}/2)/2$$

$$V_{OST} = V_{IN-} - V_{IN+}$$

$$V_{OUT} = (V_{DD}/2) + (V_P - V_M) + V_{OST}(1 + G_{DM})$$

Where:

G_{DM}	= Differential Mode Gain	(V/V)
V_{CM}	= Op Amp's Common Mode Input Voltage	(V)
V_{OST}	= Op Amp's Total Input Offset Voltage	(mV)

3.0 PIN DESCRIPTIONS

Descriptions of the pins are listed in [Table 3-1](#).

TABLE 3-1: PIN FUNCTION TABLE

MCP6061		MCP6062		MCP6064	Symbol	Description
SOIC	2x3 TDFN	SOIC	2x3 TDFN	SOIC, TSSOP		
6	6	1	1	1	V_{OUT}, V_{OUTA}	Analog Output (op amp A)
2	2	2	2	2	V_{IN}^{-}, V_{INA}^{-}	Inverting Input (op amp A)
3	3	3	3	3	V_{IN}^{+}, V_{INA}^{+}	Non-inverting Input (op amp A)
7	7	8	8	4	V_{DD}	Positive Power Supply
—	—	5	5	5	V_{INB}^{+}	Non-inverting Input (op amp B)
—	—	6	6	6	V_{INB}^{-}	Inverting Input (op amp B)
—	—	7	7	7	V_{OUTB}	Analog Output (op amp B)
—	—	—	—	8	V_{OUTC}	Analog Output (op amp C)
—	—	—	—	9	V_{INC}^{-}	Inverting Input (op amp C)
—	—	—	—	10	V_{INC}^{+}	Non-inverting Input (op amp C)
4	4	4	4	11	V_{SS}	Negative Power Supply
—	—	—	—	12	V_{IND}^{+}	Non-inverting Input (op amp D)
—	—	—	—	13	V_{IND}^{-}	Inverting Input (op amp D)
—	—	—	—	14	V_{OUTD}	Analog Output (op amp D)
1, 5, 8	1, 5, 8	—	—	—	NC	No Internal Connection
—	9	—	9	—	EP	Exposed Thermal Pad (EP); must be connected to V_{SS} .

3.1 Analog Outputs

The output pins are low-impedance voltage sources.

3.2 Analog Inputs

The non-inverting and inverting inputs are high-impedance CMOS inputs with low bias currents.

3.3 Power Supply Pins

The positive power supply (V_{DD}) is 1.8V to 6.0V higher than the negative power supply (V_{SS}). For normal operation, the other pins are at voltages between V_{SS} and V_{DD} .

Typically, these parts are used in a single (positive) supply configuration. In this case, V_{SS} is connected to ground and V_{DD} is connected to the supply. V_{DD} will need bypass capacitors.

3.4 Exposed Thermal Pad (EP)

There is an internal electrical connection between the Exposed Thermal Pad (EP) and the V_{SS} pin; they must be connected to the same potential on the Printed Circuit Board (PCB).

MCP6061/2/4

NOTES:

4.0 APPLICATION INFORMATION

The MCP6061/2/4 family of op amps is manufactured using Microchip's state-of-the-art CMOS process and is specifically designed for low-power, high precision applications.

4.1 Rail-to-Rail Input

4.1.1 PHASE REVERSAL

The MCP6061/2/4 op amps are designed to prevent phase reversal when the input pins exceed the supply voltages. Figure 2-34 shows the input voltage exceeding the supply voltage without any phase reversal.

4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

The ESD protection on the inputs can be depicted as shown in Figure 4-1. This structure was chosen to protect the input transistors and to minimize input bias current (I_B). The input ESD diodes clamp the inputs when they try to go more than one diode drop below V_{SS} . They also clamp any voltage that go too far above V_{DD} ; their breakdown voltage is high enough to allow normal operation and low enough to bypass ESD events within the specified limits.

FIGURE 4-1: Simplified Analog Input ESD Structures.

In order to prevent damage and/or improper operation of these op amps, the circuit they are in must limit the voltages and currents at the V_{IN+} and V_{IN-} pins (see Section 1.1 “Absolute Maximum Ratings †” at the beginning of Section 1.0 “Electrical Characteristics”). Figure 4-2 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins (V_{IN+} and V_{IN-}) from going too far below ground, and the resistors R_1 and R_2 limit the possible current drawn out of the input pins. Diodes D_1 and D_2 prevent the input pins (V_{IN+} and V_{IN-}) from going too far above V_{DD} . When implemented as shown, resistors R_1 and R_2 also limit the current through D_1 and D_2 .

FIGURE 4-2: Protecting the Analog Inputs.

It is also possible to connect the diodes to the left of the resistors R_1 and R_2 . In this case, the currents through the diodes D_1 and D_2 need to be limited by some other mechanism. The resistors then serve as in-rush current limiters; the DC currents into the input pins (V_{IN+} and V_{IN-}) should be very small. A significant amount of current can flow out of the inputs when the common mode voltage (V_{CM}) is below ground (V_{SS}). (See Figure 2-36).

4.1.3 NORMAL OPERATION

The input stage of the MCP6061/2/4 op amps uses two differential input stages in parallel. One operates at a low common mode input voltage (V_{CM}), while the other operates at a high V_{CM} . With this topology, the device operates with a V_{CM} up to 300 mV above V_{DD} and 300 mV below V_{SS} . (See Figure 2-13). The input offset voltage is measured at $V_{CM} = V_{SS} - 0.3V$ and $V_{DD} + 0.3V$ to ensure proper operation.

The transition between the input stages occurs when V_{CM} is near $V_{DD} - 1.1V$ (See Figures 2-4, 2-5 and Figure 2-6). For the best distortion performance and gain linearity, with non-inverting gains, avoid this region of operation.

4.2 Rail-to-Rail Output

The output voltage range of the MCP6061/2/4 op amps is $V_{SS} + 15 \text{ mV}$ (minimum) and $V_{DD} - 15 \text{ mV}$ (maximum) when $R_L = 10 \text{ k}\Omega$ is connected to $V_{DD}/2$ and $V_{DD} = 6.0V$. Refer to Figures 2-27 and 2-28 for more information.

4.3 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response, with overshoot and ringing in the step response. While a unity-gain buffer ($G = +1$) is the most sensitive to capacitive loads, all gains show the same general behavior.

When driving large capacitive loads with these op amps (e.g., > 100 pF when $G = +1$), a small series resistor at the output (R_{ISO} in Figure 4-3) improves the feedback loop's phase margin (stability) by making the output load resistive at higher frequencies. The bandwidth will be generally lower than the bandwidth with no capacitance load.

FIGURE 4-3: Output Resistor, R_{ISO} Stabilizes Large Capacitive Loads.

Figure 4-4 gives recommended R_{ISO} values for different capacitive loads and gains. The x-axis is the normalized load capacitance (C_L/G_N), where G_N is the circuit's noise gain. For non-inverting gains, G_N and the Signal Gain are equal. For inverting gains, G_N is $1 + |\text{Signal Gain}|$ (e.g., -1 V/V gives $G_N = +2$ V/V).

FIGURE 4-4: Recommended R_{ISO} Values for Capacitive Loads.

After selecting R_{ISO} for your circuit, double-check the resulting frequency response peaking and step response overshoot. Modify R_{ISO} 's value until the response is reasonable. Bench evaluation and simulations with the MCP6061/2/4 SPICE macro model are very helpful.

4.4 Supply Bypass

With this family of operational amplifiers, the power supply pin (V_{DD} for single-supply) should have a local bypass capacitor (i.e., $0.01 \mu\text{F}$ to $0.1 \mu\text{F}$) within 2 mm for good high frequency performance. It can use a bulk capacitor (i.e., $1 \mu\text{F}$ or larger) within 100 mm to provide large, slow currents. This bulk capacitor can be shared with other analog parts.

4.5 Unused Op Amps

An unused op amp in a quad package (MCP6064) should be configured as shown in Figure 4-5. These circuits prevent the output from toggling and causing crosstalk. Circuit A sets the op amp at its minimum noise gain. The resistor divider produces any desired reference voltage within the output voltage range of the op amp; the op amp buffers that reference voltage. Circuit B uses the minimum number of components and operates as a comparator, but it may draw more current.

FIGURE 4-5: Unused Op Amps.

4.6 PCB Surface Leakage

In applications where low input bias current is critical, Printed Circuit Board (PCB) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is $10^{12}\Omega$. A 5V difference would cause 5 pA of current to flow; which is greater than the MCP6061/2/4 family's bias current at +25°C (± 1.0 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. An example of this type of layout is shown in [Figure 4-6](#).

FIGURE 4-6: Example Guard Ring Layout for Inverting Gain.

1. Non-inverting Gain and Unity-Gain Buffer:
 - a) Connect the non-inverting pin (V_{IN+}) to the input with a wire that does not touch the PCB surface.
 - b) Connect the guard ring to the inverting input pin (V_{IN-}). This biases the guard ring to the common mode input voltage.
2. Inverting Gain and Transimpedance Gain Amplifiers (convert current to voltage, such as photo detectors):
 - a) Connect the guard ring to the non-inverting input pin (V_{IN+}). This biases the guard ring to the same reference voltage as the op amp (e.g., $V_{DD}/2$ or ground).
 - b) Connect the inverting pin (V_{IN-}) to the input with a wire that does not touch the PCB surface.

4.7 Application Circuits

4.7.1 GYRATOR

The MCP6061/2/4 op amps can be used in gyrator applications. The gyrator is an electric circuit which can make a capacitive circuit behave inductively. Figure 4-7 shows an example of a gyrator simulating inductance, with an approximately equivalent circuit below. The two Z_{IN} have similar values in typical applications. The primary application for a gyrator is to reduce the size and cost of a system by removing the need for bulky, heavy and expensive inductors. For example, RLC bandpass filter characteristics can be realized with capacitors, resistors and operational amplifiers without using inductors. Moreover, gyrators will typically have higher accuracy than real inductors, due to the lower cost of precision capacitors than inductors.

FIGURE 4-7: Gyrator.

4.7.2 INSTRUMENTATION AMPLIFIER

The MCP6061/2/4 op amps are well suited for conditioning sensor signals in battery-powered applications. Figure 4-8 shows a two op amp instrumentation amplifier, using the MCP6062, that works well for applications requiring rejection of common mode noise at higher gains. The reference voltage (V_{REF}) is supplied by a low impedance source. In single supply applications, V_{REF} is typically $V_{DD}/2$.

FIGURE 4-8: Two Op Amp Instrumentation Amplifier.

To obtain the best CMRR possible, and not limit the performance by the resistor tolerances, set a high gain with the R_G resistor.

4.7.3 PRECISION COMPARATOR

Use high gain before a comparator to improve the latter's input offset performance. Figure 4-9 shows a gain of 11 V/V placed before a comparator. The reference voltage V_{REF} can be any value between the supply rails.

FIGURE 4-9: Precision, Non-inverting Comparator.

5.0 DESIGN AIDS

Microchip provides the basic design tools needed for the MCP6061/2/4 family of op amps.

5.1 SPICE Macro Model

The latest SPICE macro model for the MCP6061/2/4 op amps is available on the Microchip web site at www.microchip.com. The model was written and tested in official Orcad (Cadence) owned PSPICE. For the other simulators, it may require translation.

The model covers a wide aspect of the op amp's electrical specifications. Not only does the model cover voltage, current, and resistance of the op amp, but it also covers the temperature and noise effects on the behavior of the op amp. The model has not been verified outside of the specification range listed in the op amp data sheet. The model behaviors under these conditions can not be guaranteed that it will match the actual op amp performance.

Moreover, the model is intended to be an initial design tool. Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

5.2 FilterLab® Software

Microchip's FilterLab® software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip web site at www.microchip.com/filterlab, the FilterLab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

5.3 Mindi™ Circuit Designer & Simulator

Microchip's Mindi™ Circuit Designer & Simulator aids in the design of various circuits useful for active filter, amplifier and power-management applications. It is a free online circuit designer & simulator available from the Microchip web site at www.microchip.com/mindi. This interactive circuit designer and simulator enables designers to quickly generate circuit diagrams, simulate circuits. Circuits developed using the Mindi Circuit Designer & Simulator can be downloaded to a personal computer or workstation.

5.4 Microchip Advanced Part Selector (MAPS)

MAPS is a software tool that helps semiconductor professionals efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip website at www.microchip.com/maps, the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool you can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for Datasheets, Purchase, and Sampling of Microchip parts.

5.5 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help you achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip web site at www.microchip.com/analogtools.

Some boards that are especially useful are:

- MCP6XXX Amplifier Evaluation Board 1
- MCP6XXX Amplifier Evaluation Board 2
- MCP6XXX Amplifier Evaluation Board 3
- MCP6XXX Amplifier Evaluation Board 4
- Active Filter Demo Board Kit
- 5/6-Pin SOT-23 Evaluation Board, P/N VSUPEV2
- 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board, P/N SOIC8EV
- 14-Pin SOIC/TSSOP/DIP Evaluation Board, P/N SOIC14EV

5.6 Application Notes

The following Microchip Analog Design Note and Application Notes are available on the Microchip web site at www.microchip.com/appnotes and are recommended as supplemental reference resources.

- **ADN003:** *"Select the Right Operational Amplifier for your Filtering Circuits"*, DS21821
- **AN722:** *"Operational Amplifier Topologies and DC Specifications"*, DS00722
- **AN723:** *"Operational Amplifier AC Specifications and Applications"*, DS00723
- **AN884:** *"Driving Capacitive Loads With Op Amps"*, DS00884
- **AN990:** *"Analog Sensor Conditioning Circuits – An Overview"*, DS00990
- **AN1177:** *"Op Amp Precision Design: DC Errors"*, DS01177
- **AN1228:** *"Op Amp Precision Design: Random Noise"*, DS01228

These application notes and others are listed in the design guide:

- *"Signal Chain Design Guide"*, DS21825

6.0 PACKAGING INFORMATION

6.1 Package Marking Information

8-Lead SOIC (150 mil) (MCP6061, MCP6062)

Example:

8-Lead 2x3 TDFN (MCP6061, MCP6062)

Example:

14-Lead SOIC (150 mil) (MCP6064)

Example:

14-Lead TSSOP (MCP6064)

Example:

Legend:	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

MCP6061/2/4

8-Lead Plastic Small Outline (SN) – Narrow, 3.90 mm Body [SOIC]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Dimension Limits	Units	MILLIMETERS		
		MIN	NOM	MAX
Number of Pins	N	8		
Pitch	e	1.27 BSC		
Overall Height	A	–	–	1.75
Molded Package Thickness	A2	1.25	–	–
Standoff §	A1	0.10	–	0.25
Overall Width	E	6.00 BSC		
Molded Package Width	E1	3.90 BSC		
Overall Length	D	4.90 BSC		
Chamfer (optional)	h	0.25	–	0.50
Foot Length	L	0.40	–	1.27
Footprint	L1	1.04 REF		
Foot Angle	φ	0°	–	8°
Lead Thickness	c	0.17	–	0.25
Lead Width	b	0.31	–	0.51
Mold Draft Angle Top	α	5°	–	15°
Mold Draft Angle Bottom	β	5°	–	15°

Notes:

- Pin 1 visual index feature may vary, but must be located within the hatched area.
- § Significant Characteristic.
- Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.15 mm per side.
- Dimensioning and tolerancing per ASME Y14.5M.
BSC: Basic Dimension. Theoretically exact value shown without tolerances.
REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-057B

8-Lead Plastic Small Outline (SN) – Narrow, 3.90 mm Body [SOIC]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

RECOMMENDED LAND PATTERN

Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Contact Pitch	E	1.27 BSC		
Contact Pad Spacing	C		5.40	
Contact Pad Width (X8)	X1			0.60
Contact Pad Length (X8)	Y1			1.55

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2057A

MCP6061/2/4

8-Lead Plastic Dual Flat, No Lead Package (MN) – 2x3x0.75 mm Body [TDFN]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Number of Pins	N	8		
Pitch	e	0.50 BSC		
Overall Height	A	0.70	0.75	0.80
Standoff	A1	0.00	0.02	0.05
Contact Thickness	A3	0.20 REF		
Overall Length	D	2.00 BSC		
Overall Width	E	3.00 BSC		
Exposed Pad Length	D2	1.20	-	1.60
Exposed Pad Width	E2	1.20	-	1.60
Contact Width	b	0.20	0.25	0.30
Contact Length	L	0.25	0.30	0.45
Contact-to-Exposed Pad	K	0.20	-	-

Notes:

- Pin 1 visual index feature may vary, but must be located within the hatched area.
- Package may have one or more exposed tie bars at ends.
- Package is saw singulated
- Dimensioning and tolerancing per ASME Y14.5M
 - BSC: Basic Dimension. Theoretically exact value shown without tolerances.
 - REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing No. C04-129B

8-Lead Plastic Dual Flat, No Lead Package (MN) – 2x3x0.75 mm Body [TDFN]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at <http://www.microchip.com/packaging>

RECOMMENDED LAND PATTERN

Units		MILLIMETERS		
Dimension Limits		MIN	NOM	MAX
Contact Pitch	E	0.50 BSC		
Optional Center Pad Width	W2			1.46
Optional Center Pad Length	T2			1.36
Contact Pad Spacing	C1		3.00	
Contact Pad Width (X8)	X1			0.30
Contact Pad Length (X8)	Y1			0.75
Distance Between Pads	G	0.20		

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

APPENDIX A: REVISION HISTORY

Revision A (June 2009)

- Original Release of this Document.

NOTES:

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>		<u>X</u>	<u>XX</u>
Device		Temperature Range	Package
Device:	MCP6061: Single Op Amp MCP6061T: Single Op Amp (Tape and Reel) (SOIC and 2x3 TDFN) MCP6062: Dual Op Amp MCP6062T: Dual Op Amp (Tape and Reel) (SOIC and 2x3 TDFN) MCP6064: Quad Op Amp MCP6064T: Quad Op Amp (Tape and Reel) (SOIC and TSSOP)		
Temperature Range:	E = -40°C to +125°C		
Package:	MNY * = Plastic Dual Flat, No Lead, (2x3 TDFN) 8-lead SL = Plastic SOIC (150 mil Body), 14-lead SN = Plastic SOIC, (150 mil Body), 8-lead ST = Plastic TSSOP (4.4mm Body), 14-lead * Y = Nickel palladium gold manufacturing designator. Only available on the TDFN package.		
Examples:			
a)	MCP6061-E/SN:	8LD SOIC pkg	
b)	MCP6061T-E/SN:	Tape and Reel, 8LD SOIC pkg	
c)	MCP6061-E/MNY:	8LD 2x3 TDFN pkg	
d)	MCP6061T-E/MNY:	Tape and Reel, 8LD 2x3 TDFN pkg	
a)	MCP6062-E/SN:	8LD SOIC pkg	
b)	MCP6062T-E/SN:	Tape and Reel, 8LD SOIC pkg	
c)	MCP6062-E/MNY:	8LD 2x3 TDFN pkg	
d)	MCP6062T-E/MNY:	Tape and Reel, 8LD 2x3 TDFN pkg	
a)	MCP6064-E/SL:	14LD SOIC pkg	
b)	MCP6064T-E/SL:	Tape and Reel, 14LD SOIC pkg	
c)	MCP6064-E/ST:	14LD TSSOP pkg	
d)	MCP6064T-E/ST:	Tape and Reel, 14LD TSSOP pkg	

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

The Microchip name and logo, the Microchip logo, dsPIC, KEELOQ, KEELOQ logo, MPLAB, PIC, PICmicro, PICSTART, rfPIC and UNI/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, Hampshire, HI-TECH C, Linear Active Thermistor, MXDEV, MXLAB, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, CodeGuard, dsPICDEM, dsPICDEM.net, dsPICworks, dsSPEAK, ECAN, ECONOMONITOR, FanSense, HI-TIDE, In-Circuit Serial Programming, ICSP, ICEPIC, Mindi, MiWi, MPASM, MPLAB Certified logo, MPLIB, MPLINK, mTouch, nanoWatt XLP, Omniscent Code Generation, PICC, PICC-18, PICkit, PICDEM, PICDEM.net, PICTail, PIC³² logo, REAL ICE, rLAB, Select Mode, Total Endurance, TSHARC, WiperLock and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
== ISO/TS 16949:2002 ==

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
