GENERAL DESCRIPTION

The Am29860 Series bus transceivers provide high performance bus interface buffering for wide data/address paths or buses carrying parity. The Am29863/64 9-bit transceivers have NOR-ed output enables for maximum control flexibility. All transceiver data inputs have 200mV minimum input hysteresis to provide improved noise rejection.

All of the Am29800 high performance interface family are designed for high capacitance load drive capability while providing low capacitance bus loading at both inputs and outputs. All inputs are Schottky diode inputs, and all outputs are designed for low capacitance bus loading in the high impedance state.
